Inline

If Conflict -> The **nearest** style will Applied

Css Comment

`/* */`

```
{  
  /* This is a Comment in CSS */  
    
    
    
    
    
    
}
```

CSS

Css Selectors

.Class Name

#ID

Element Name

Attribute name

* Astrick

\$

```
a[href*="w3schools"]
```

Selects every <a> element whose href attribute value **contains the substring** "w3schools"

[Attribute = Value]

```
[title~="flower"]
```

~

Selects all elements with a title attribute **containing** the word "flower"

```
[lang|= "en"]
```

|

Selects all elements with a lang attribute value **equal** to "en" or **starting** with "en-"

```
a[href^="https"]
```

^

Selects every <a> element whose href attribute value **begins** with "https"

```
a[href$=".pdf"]
```

\$

Selects every <a> element whose href attribute value **ends** with ".pdf"

[background-repeat]

[background-attachment]

[background-position];

Css Gradient

- **Linear Gradients** (goes down/up/left/right/diagonally)
- **Radial Gradients** (defined by their center)
- **Conic Gradients** (rotated around a center point)

```
background-image: linear-gradient(  
direction,  
color-stop1,  
color-stop2,  
...);
```

Use angle instead of direction

```
background-image: linear-gradient(180deg, red, yellow);
```

Css Gradient

- Radial Gradients (defined by their center)

```
background-image: radial-gradient(  
red,  
yellow,  
green);
```

```
background-image: radial-gradient(  
shape size at position,  
start-color, ...,  
last-color);
```

```
background-image: radial-gradient(circle, red,  
yellow, green);
```

Css Gradient

Conic Gradients (rotated around a center point)

```
background-image: conic-gradient(red, yellow, green);
```

Transitions

Transition Shorthand

The diagram illustrates the CSS Transition Shorthand syntax: `transition: transform 2s linear 1s;`. It is presented within a light gray rectangular box with a subtle drop shadow and three colored window control buttons (red, yellow, green) in the top-left corner. Four purple arrows point from labels to specific parts of the code: 'transition-property' points to 'transform', 'transition-timing-function' points to 'linear', 'transition-duration' points to '2s', and 'transition-delay' points to '1s'.

transition-property transition-timing-function

```
transition: transform 2s linear 1s;
```
